Credential ID 9F4BYXXEQ9

RELEVANT COURSEWORK

- Personality and Friend Selections

This research delves into the intriguing realm of personality and its influence on friendship choices. It explores whether individuals prioritize personality traits when forming friendships, and if so, which traits are most significant. The study involves surveys administered to both the researcher's friends and colleagues, encompassing psychology majors and non-psychology students.

- Sex Differences of Emotion Regulation

This study focuses on understanding how individuals of different genders regulate their emotions when faced with negative situations. It examines scientific research and real-world scenarios to uncover the factors contributing to sex differences in emotional responses to similar challenges. Various methodologies, including

functional magnetic resonance imaging (fMRI), are employed to complement experimental findings. Despite previous research efforts, achieving a consensus on this complex issue remains challenging. The study aims to shed light on how males and females manage emotional distress differently and the potential implications of these variations.

- Perceptions of Gender: Speaker and Tone

The study involved approximately 100 participants and employed a 2x2 factorial design to manipulate the gender of the speaker and the tone of the speech. Likert scales were used to assess the perceived likeability of the speaker, as well as the speaker's perceived masculinity and femininity. The study aimed to shed light on the impact of gender stereotypes in language and its implications for various contexts, including the workplace and society.
